

Ilya Obretetskiy

Full Stack Developer

+447564055308 obreil54@gmail.com <https://ilyaobretetskiy.com/> London, UK

SUMMARY

Versatile Full Stack Developer with a background in Public Relations and Public Affairs, providing a unique blend of technical and strong communication skills. Graduated from the Le Wagon Web Development bootcamp to gain the essential skills needed to thrive in professional development environments. Passionate about leveraging evolving technologies to creatively solve real world problems.

SKILLS

Technical: Ruby on Rails, HTML, CSS/SCSS, JavaScript, SQL, PostgreSQL, GIT, Github, Python, Capybara, Selenium, Heroku, OOP

Soft: Collaboration, Communication, Problem-Solving, Adaptability, Time-Management, Stakeholder Engagement

EDUCATION

Web Development

London, UK

Le Wagon

10/2023 - 12/2023

- Successfully completed a rigorous 9-week full-time, BCS-accredited coding bootcamp. The program emphasized core programming concepts, problem-solving, and building dynamic web applications through hands-on projects and real-world development practices
- Engaged in a collaborative learning environment, actively participating in pair programming and contributing to team projects
- Designed, developed, and deployed a Ruby on Rails web application as part of a team of four within a two-week timeframe. Delivered a polished presentation to an audience of technical and non-technical stakeholders, showcasing key features and the value of the application

Bachelor of Science in International Affairs (Political Science Concentration)

Tallahassee, FL, USA

Florida State University

08/2016 - 08/2020

EXPERIENCE

Web Development Contractor

London, UK

[Shers Studios](#)

09/2024 - Present

https://github.com/obreil54/she_and_hers

- Collaborated with the founder to build a Ruby on Rails e-commerce platform which serves as the brand's online shop and public-facing platform, showcasing products, past projects and the brand's overall ethos
- Integrated Stripe for secure payments and Shippo for shipping rates, label generation, and tracking, streamlining the checkout and order fulfillment processes
- Integrated Google Merchant to automate product updates, improving visibility and discoverability across search engines
- Added a custom measurement feature for bespoke garments

Web Development Contractor

Volgograd, Russia (Remote)

[Magnat](#)

02/2024 - 09/2024

<https://github.com/obreil54/Magnat-Questionnaire>

- Worked closely with the head of IT at the company to develop a Ruby on Rails web application which serves as an auditing tool for monitoring the condition of IT equipment loaned to employees, ensuring enhanced accountability and operational efficiency
- Implemented a dual authentication mechanism: a traditional login-password approach for admins, and a passwordless system for general users, enhancing security and user experience
- Utilised Rails Admin with additional gems for XLSX import capabilities and created custom actions for tailored reporting and exporting, significantly streamlining administrative workflows
- Integrated photo submission within questionnaires, allowing users to upload images that are directly synced to the client's file management API through Active Record

Research Executive

London, UK

[Rud Pedersen Public Affairs](#)

09/2022 - 03/2023

- Contributed to a high-performing public relations team that secured tier 1 placements, including a notable op-ed in the Financial Times
- Collaborated with a cross-functional team, working closely with web developers to successfully deliver a company website for an investment banking client. Facilitated seamless communication between the client and the development team while actively shaping the website structure using the Storyblok CMS

Intern

London, UK

[Kreab London](#)

09/2021 - 08/2022

- Leveraged strong writing skills to draft and edit external press releases and other communications for both international and UK clients
- Played a key role in supporting new business initiatives through proactive research and networking activities

OTHER PROJECTS

Cheddar

<https://github.com/Ches-ctrl/Cheddar>

Streamlined job application platform for graduates

- Took charge of developing a form-filling tool using Capybara and Selenium, integrated with a Chromium browser. This feature enables users to seamlessly apply to multiple jobs on various Applicant Tracking Systems directly within our application, enhancing efficiency and speed of applications
- Implemented various front-end features, including the integration of an external API to dynamically fetch and display logos for companies and universities
